

JBS registered the first Greenhouse Gas (GHG) Reduction Project

Sustainability is a fundamental value for the Company and with this objective in mind, JBS became the first beef production company to register a CDL (Clean Development Mechanism) project at UN – United Nations, to reduce Greenhouse Gas (GHG) emissions at the wastewater treatment plant at its unit located in Barra do Garças at Brazilian state of Mato Grosso.

Within the beef sector, JBS is taking pioneering social and environmental initiatives such as concentrating commitments related to Greenhouse Gas (GHG) Emissions Reductions as well as generating power using biomass, producing Biodiesel from animal fat and putting in place Environmental Management Systems in all production facilities.
